

Sustainability Commitment

Authenticity, responsibility and integrity are core values of Resense Spa. In all we do, we assume responsibility towards our teams, clients, guests, community, and the environment. Our responsibility for people, planet and climate guides our actions related to our operations, guests, clients, supply chain (resources and suppliers), people, community and environment. Our future climate strategy will be based on the goal of limiting global warming to well below two degrees Celsius (2 °C) compared to pre-industrial times, as defined within the Paris Agreement. In collaboration with EarthCheck, we are currently evaluating the consequences of this goal for our business operations and potential contributions to climate protection to be made throughout our operations and supply chain.

Being the sense in wellness is a strategic commitment to creating measurable benefit for the company, our clients, our teams, our guests and the communities we serve through socially responsible, market-driven business solutions.

The sense in wellness begins in our curated spaces, promoting a culture of health & wellness that improves productivity through innovative design and healthy lifestyle programming. The concept grows to embody the built environment of our spas, increasing operational and resource efficiencies and influencing human behaviours, further enhancing the assets value. The positive effects of the sense in wellness extend to our network of spas globally, who are engaged in developing policies and practices that incorporate social, environmental, economic and healthy living considerations. The result is a collaborative model that's born in business but which benefits our entire stakeholder community.

Impact

Incorporating target objectives aligned to the United Nations Sustainable Development Goals (SDGs), Resense's sense in wellness establishes an ecosystem of social responsibility that influences regionally specific outcomes – creating a culture of shared interest and collaboration in the development of integrated environmental, health & wellness and social initiatives that drive economic vitality and long-term value.

Unite

Through the sense in wellness, Resense seeks to improve the well-being of all communities we serve – from the micro-environment of employees sharing a single office space to our guests utilising a large wellness offering. This sense of connectivity and collaboration extends beyond the boundaries of the spa itself, influencing in a positive way the health and well-being of all our partners.

Commit

We pledge to conceptualise, develop and build strong, equitable and sustainable wellness projects including providing access to healthy environments and promoting public safety, diversity and social justice. Through the sense in wellness, we commit to reducing and reporting the impacts of climate change. We pledge to protect the environment, reduce greenhouse gas emissions and ensure spaces and products are safe, resilient and sustainable.
